Prezados,
Distribuindo a pedido uma oportunidade de PhD em Norway.
Fiquem à vontade para contactar Rogardt Heldal (Rogardt.Heldal@hvl.no).
Abraços a Todos,
Elisa

Assunto: PhD position

Hi all,

Could you please forward this email to anyone you think could be a good candidate:

I have a four-year PhD position with good working conditions.

About the PhD project:

In the present day, we find ourselves with numerous stand-alone applications that are meticulously crafted to function with particular datasets and environments. While these applications certainly serve their purpose and prove beneficial, they often lack the ability to collaborate seamlessly within a System of Systems (SoS) framework. The primary hurdle in this regard revolves around achieving interoperability when integrating software and data from various organisations.

This interoperability macro-challenge includes software engineering challenges related to data, such as how to:

1. Deal with and manage heterogeneous data provided by different sources.
2. Combine data in the best possible way.
3. Measure and even ensure the quality and freshness of data from different organisations.

Thanks to our strong collaboration with numerous companies and research institutes in the marine sector, we have a unique opportunity to conduct compelling case studies within this domain.

Job Application: <https://www.jobbnorge.no/en/available-jobs/job/247243/phd-research-fellow-in-interoperability-eliminating-data-silos-in-software-systems>
